Client Information Leaflet

Keep this leaflet safe, as you may need to refer to it again. Please ask your vet if you have any further questions.
This medicine has been prescribed for your horse ONLY. Do not take it yourself or give it to another person or any other animal; it may harm them even if their symptoms appear to be the same and could result in inadvertent contravention of Horse Passport legislation.

While BEVA have made every effort in preparing this information leaflet, the contents and any statements are made in good faith purely for general guidance and cannot be regarded as substitute for professional advice. The publishers, contributors and BEVA do not take responsibility for the information provided on this leaflet and hence do not accept any liability for loss or expense incurred (by you or persons that you disseminate the materials to) as a result of relying on content in this leaflet. To this end, you are advised to consult your vet and seek his/her professional advice before taking any steps set out in this leaflet. If you are a vet, you must not rely on the contents in this leaflet without independently verifying the correctness and veracity of the contents.

Silver Sulfadiaze

This medicine is not licensed as a veterinary medicine for use in the horse or donkey. Although it is not licensed for use in horses it is being used under the prescribing cascade.

What is silver sulfadiazine?
Sliver sulfadiazine is a silver-based compound that has anti-bacterial and anti-fungal activity.

Why has my horse been prescribed silver sulfadiazine?
Sliver sulfadiazine has been prescribed by your veterinary surgeon to prevent or treat bacterial infection of the skin. It is often used in the treatment of burns.

How is this medicine administered? This medicine is applied regularly to affected areas of the skin. Always use disposable gloves to handle and apply the medication.

Can my horse have silver sulfadiazine along with other medicines? There are unlikely to be incompatibilities but if you are using other treatments then you should discuss this with your veterinary surgeon. Do not apply other treatments to the skin lesions without discussing this with your veterinary surgeon.

What should I do if I run out of silver sulfadiazine?
Contact your veterinary surgeon (preferably before you run out of the medication) to check if further treatment is required.

If my horse is not improving, what should I do?
Contact your veterinary surgeon who will review whether this is still the correct medication for your horse.

What are the possible side-effects of using silver sulfadiazine in my horse?
Side-effects are very uncommon. Application of chemicals to the skin is always accompanied by the possibility of a localised skin reaction but the risk with this medication is very low. Signs of a reaction could include swelling, redness or oozing from the skin surface. If you are concerned you should speak to your veterinary surgeon.

What should I do if a person accidentally takes this medicine? If a person accidentally takes this medicine, you should contact NHS direct (telephone 111) or take the person to a local hospital taking this leaflet and the medication with you.

How should I store and handle silver sulfadiazine?
The medication should be kept out of the reach of children and should be kept cool, dark, and dry. Always use gloves to handle or apply this medication.

What should I do if I accidentally overdose my horse? If you apply too much cream or ointment then it is unlikely to cause any harm. If you are concerned, then contact your veterinary surgeon.

What should I do if I miss a dose? Just restart the medicine and make a note so that you can inform your veterinary surgeon of any missed doses when they re-evaluate your horse.

If my horse is better, what should I do with the remaining medicine? Do not discontinue treatment early without discussion with your veterinary surgeon. If you have excess medicine then please contact your veterinary surgeon who can arrange for it to be disposed of appropriately.

What do I need to record in my horse's passport?
You should record the use of this medication in your horse's passport or sign section IX to permanently exclude the horse from the human food chain.

The prescribing cascade: This medicine is authorised for use in human patients or other animal species and is used by vets under the 'prescribing cascade'. Your vet can explain this in further detail and explain why they are prescribing this drug for your horse. If you do not agree to the use of this medicine in your horse you should discuss this before administration.
